Motor protection

Selection of the protection device

Motor protection - General aspects

Selection of an adequate motor protection is of great importance with regard to the operational reliability and service life of a motor. The effectiveness of the available motor protection devices depends on the range of application. The following shows a summary which facilitates the correct choice. Since no general rules exist, we will gladly give you further advice in special cases such as heavy starting.

Efficiency	Protection device current-dependent: Fuses	Overload relays with protection device in case of phase failure	Protection device, temperature-dependent: Thermistor machine protection CUSTORAPID®
Reasons for unwanted overloading of the motor winding			
1 Current overloading	<input type="checkbox"/>		
2 Rated duty types S1-S8 to IEC 34-1	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
3 Operation when starting, braking, reversing	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
4 Operation at starting rates Schalthäufigkeit 15 ops./h	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
5 Locked motor	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/> In the case of motors with thermally critical rotor
6 Overload at phase failure	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
7 Over-/undervoltage in supply mains	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
8 Variation of frequency in supply mains	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
9 Increased ambient temperature	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
10 External heating of the motor (e.g.: bearing heating)	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
11 Obstruction to motor cooling	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Efficiency of protection device: not effective
 partly effective
 fully effective

Note on fuses

Fuses do not protect a motor against overload. They serve only as short-circuit protection of switchgear and cables. For direct starting, fuses of around 1.5 to 2.5 times the rated current should be used. A fuse must withstand 1.3 times its rated current for a sustained period. This would entail thermal overload of the motor. In order to protect motors against short-circuits, it is advisable to use fuses aM in conjunction with the thermal overload relay. The specifications in relation to short-circuit protection for contactors and overload relays must be noted when selecting the rating of fuses or circuit-breakers.

FASTON terminal blocks LC ...

Description

The FASTON terminal blocks are supplied as complete mounting kits for thermal overload relays TA 25 DU and as mounting kit for single set-ups DB 25... A maximum of 2 6.3 mm tab connectors or 2 2.8 mm tab connectors can be connected per pole to the FASTON terminal blocks.

⚠ The connection points are safe from finger-touch and safe from touch by the back of the hand to VDE 0106, Part 100.

Remote tripping control

The coil serves to remotely trip the thermal overload relays TA 25 DU, T 450/900 DU/SU.

The coil is not approved for continuous operation. Pulse duration 0.2 ... 0.35 s.

DS 25-A-24	1SAZ 201 501 R0001	24 V	} Operating-voltage U_c at 50/60 Hz	1	0.100

DS 25-A-500	1SAZ 201 501 R0006	500 V		1	0.100

Remote reset coil

The coil serves to reset the thermal overload relays TA 25 DU, T 450/900 DU/SU.

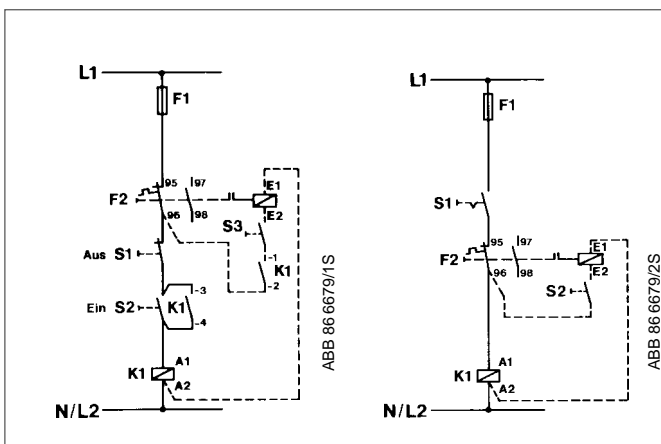

The overload relay must be set to "manual reset" for this purpose.

The coil is not approved for continuous operation. Pulse duration 0.2 ... 0.35 s.

Notes

Thermal overload relays T...

Description

5B760153

Application

Thermal overload relays T are used in connection with contactors A, BC, AE and EH to protect motors with a rated operating voltage of up to 690 V AC and 800 V DC.

Product range

Standard relays

Types: T 7 DU, TA 25 DU, TA 42 DU, TA 75 DU, TA 80 DU, TA 110 DU, T / TA 200 DU, T / TA 450 DU/SU, T 900 DU/SU

- Relays T 7 to T / TA 200 are connected directly into the motor circuit and the motor current flows through them.
- Relays T / TA 450 DU and T 900 DU are powered via converters with a linear characteristic.
- Relays T / TA 450 SU and T 900 SU are powered via converters with saturation characteristic and therefore have longer tripping times.
See section "Protection with heavy starting", see Page 18

Special designs

Thermal overload relays with different approvals and certificates, see Page 26. Relays to protect Ex e motors, see Page 18

Design and function

General

The relays and the accessories comply with the major international (IEC), European (EN) and national standards (DIN-VDE, NFC-UTE, BS, etc...) and meet the approval and licensing regulations necessary worldwide.

The thermal overload relays are three-pole relays

They have bimetallic releases (1 per phase) through which the motor current flows and are indirectly heated. The bimetallic releases bend subject to the influence of heating and this results in tripping of the relay. The auxiliary contacts change their switch position.

The relays feature a setting scale in Amperes. In compliance with international and national standards, the setting current is the rated **motor current** and not the tripping current (no tripping at 1.05 x I setting current, tripping at 1.2 x I setting current).

The **tripping curves** (starting from cold and warm state, three and two-phase) are shown in the technical data, Page 24.

The relays are constructed so that they protect themselves in the event of overload until the series-connected short-circuit protection trips, as shown in the tables.

Technical data

All relays feature:

- **Trip-free mechanism:** Tripping in the event of a fault is not prevented even if the Reset button is pressed.
- **Temperature compensation:** - see Page 18
- **Phase failure protection in accordance with IEC 947-4-1:** This device shortens the tripping times in the event of phase failure and thus improves the motor protection within the limits of the setting range.
- **Tripping category:** **10 A**, in the case of thermal overload relays T ... DU
30, in the case of thermal overload relays T ... SU.
- **Reset and test functions**, see Page 19

Auxiliary contacts

The relays feature two integrated auxiliary contacts

- one NC contact, marked by 95 - 96
- one NO contact, marked by 97 - 98

The two contacts are electrically isolated and are thus suitable for use in two different circuits (control circuit and signalling circuit).

Thermal overload relays T 7 DU, TA 25 DU ... T 900 DU

Technical data

Intermittent periodic duty

ABB 82 7833

Switching frequency depending on duty ratio ED in %, t_s : Motor starting time

t_s : Motor starting time

ABB 83 6246

Tripping curve of overload relay T .. starting from cold state

• Switching frequency

Thermal overload relays T cannot be operated at any arbitrary switching frequency in order to avoid tripping. Applications involving up to 15 operations per hour are acceptable. Higher switching frequencies are permitted if the duty ratio and the motor starting time are allowed for and if the motor's making current does not appreciably exceed 6 times the rated operating current. Please refer to the adjacent diagram for guideline values for the permitted switching frequency.

Example: Starting time of the motor: 1 second

Duty ratio: 40 %

means a permitted switching frequency of max. 60 operations per hour

Use of the CUSTORAPID® motor protection is recommended for higher switching frequencies and alternating loading, e.g. for frequent starting and braking. Use of a combination of thermal overload relays and CUSTORAPID® is recommended in the case of locked rotors on motors with thermally critical rotors.

• Protection with heavy starting

Relays T 450SU/T 900SU can be used for particularly severe starting conditions. The setting ranges specified on Pages 41 and 42 apply to non-recurrent looping through of the cables. The relay may also be used for lower motor rated currents. This is achieved by looping the cables through several times. The setting range specified on the rating plate is inversely proportional to the number of cables looped through.

For instance: T 450TU/SU with a setting range of 130 ... 185 A is also suitable for currents of 65 ... 92.5 A if the cables are looped through twice; the figures are 43.3 ... 61.6 A for looping the cables through three times.

• Special version for EEx e motors

Relays T 7 DM, TA 25 DU ... T 900 DU / SU are suitable for protection of EEx e motors. They have been tested and approved by the "German National Standards Laboratory" (PTB) in Braunschweig, Germany.

When selecting the overload relay, check suitability on the basis of the tripping curves. The values for the ratio of pick-up current I_a to rated current I_n and the shortest t_E time are crucial, and these must be specified on the PTB Approval Certificate and on the motor's rating plate. The relay must trip within the t_E time, i.e. the tripping curve, starting from cold state, must run below the coordinate point I_a/I_n and the t_E time.

• Example for suitability of an overload relay T/TA:

The motor with increased safety has the following data:

Output = 7.5 kW, $I_a/I_n = 7.4$ t_E time = 11 seconds.

In accordance with the adjacent tripping curve, the tripping time lies below the t_E time of the motor. The special relay version for EEx e motors differs from the normal version as follows:

• Special test of the tripping times at the works

• Special order code

Tripping curves for the individual setting ranges and the PTB Approvals Certificates may be ordered.

• Reference numbers of the PTB:

Type	Reference No. of the PTB	Type	Reference No. of the PTB
T 7 DU V 1000	3.43-187/98	T / TA 200 DU V 1000	3.53-5315/93
TA 25 DU V 1000	3.53/38 7.3023	T / TA 450 DU, T900 DU V 1000	3.53/38 1.671
TA 42 DU, TA 75 DU, TA 80 DU V 1000	3.53/38 0.418	T 450 SU, T900 SU V 1000	3.53/38 1.672
TA 110 DU V 1000	3.43-760/98		

Limit values for tripping at ambient temperatures other than 20 °C

SST 085 92 K

• Ambient temperature compensation :

The overload relays are protected against influences of ambient temperature by a bimetallic compensation element which detects the ambient temperature.

This design means that tripping occurs between -5 °C and +40 °C within the ranges defined by IEC 947-4-1. See the adjacent curve for the extended range of -25 °C resp. +55 °C.

• Example :

Tripping at -25 °C. Tripping occurs at ≤ 1.5 times the setting current.

• Reset :

Types E 16 DU, T 7 DU, TA 25 DU ... T 900 DU/SU feature a convertible Manual/Automatic reset.

• Condition as delivered :

Manual reset.

Thermal overload relays T ... DU are three-pole relays which can be converted from manual to automatic reset. The Reset button can also be used for disconnection. The built-in auxiliary contacts are electrically isolated and are therefore suitable for two different circuits

(control circuit and signalling circuit). All relays feature a facility for temperature compensation and phase failure protection. The overload relays up to size TA 110 DU are safe from finger-touch and safe from touch by the back of the hand.

Terminal shrouds are available for size T 200 DU to T 900 DU/SU. Terminal connections are delivered in open position, with Pozidrive cross-head screws (±) and screwdriver guide.

300	350	185	400
350	400	240	500

Table 2). Copper test conductor for test currents over 400 A to 800 A.

Test current range ¹⁾ (A)		Conductor cross-section ^{2), 3), 4)}			
		metric		MCM	
		Number	Cross-section (mm ²)	Number	Cross-section (mm ²)
400	500	2	150	2	250
500	630	2	185	2	350
630	800	2	240	3	300

Table 3). Copper test buses for test currents over 400 A to 3150 A.

Test current range ¹⁾ (A)		Copper buses ^{2), 3), 4), 5), 6)}		
		Number	Cross-section (mm ²)	Dimensions (inches)
400	500	2	30 x 5	1 x 0,250
500	630	2	40 x 5	1,25 x 0,250
630	800	2	50 x 5	1,5 x 0,250
800	1000	2	60 x 5	2 x 0,250
1000	1250	2	80 x 5	2,5 x 0,250
1250	1600	2	100 x 5	3 x 0,250
1600	2000	3	100 x 5	3 x 0,250
2000	2500	4	100 x 5	3 x 0,250
2500	3150	3	100 x 10	6 x 0,250

Footnotes to Tables 1, 2 and 3:

- 1) The test current must be higher than the first value in the first column and must be lower than or the same as the second value in this column.
- 2) To simplify the testing procedure and with the consent of the manufacturer, conductors with a smaller cross-section than the one determined for the test current may be used.
- 3) The table shows cross-sections of conductors alternatively in the metric system and in the AWG/MCM system and buses in mm and inches. A

comparison of the AWG/MCM system and metric cross-sections is given in Table 1.

- 4) Optionally, either one of the two conductors given for the test current range may be used.
- 5) It is assumed that buses with the larger surface area are arranged vertically. Buses may be arranged horizontally if so directed by the manufacturer.
- 6) If 4 buses are used, they must be arranged in two pairs with a mean clearance of at most 100 mm.

for contactors and mini contactors

Technical data

General technical data

Type	E 16 DU	
Standards: (major European and international standards)	IEC 60 947-4-1 / IEC 60 947-5-1 EN 60 947-4-1 / EN 60 947-5-1	
Approvals and certificates	see page 31	
Rated insulation voltage U_i	V	690
Rated operating voltage U_e		690
Impulse withstand voltage U_{imp}	kV	6
Permissible ambient temperature		
- Storage	°C	- 25 to +70
- Operation	°C	- 25 to +70
Climatic resistance to	IEC 68-2-1, IEC 68-2-2, IEC 68-2-14, IEC 68-2-30	
Mounting position	any	
Resistance to shock	Shock duration ms	11
	multiple of g	15
Resistance to vibrations (±1 mm, 10 ... 100 Hz)	multiple of g	- 5
Mounting	- onto contactor - with AB.. mounting kit for single set-ups	hooking on contactors, screwing on in main terminals by screws: 2 x M4 or 
Connection terminals and attachment type		
Main conductors (load side)/ and auxiliary contacts.		
• Screw terminal (screw size)		M3.5
- with self-disengaging clamping piece		-
- with terminal block		-
- with busbars or cable lugs		-
- Tightening torque	Nm	1
• Connection cross-sections		
- single-core or stranded	mm²	2 x 0.75...4
- flexible with wire end ferrule	mm²	2 x 0.75...4
Enclosure to IEC 947-1/EN 60 947-1	All terminals are safe from finger-touch and safe from touch by the back of the hand to VDE 0106, Part 100	

Technical data of the conducting paths

Type	E 16 DU	
Number of conducting paths	3	
Setting ranges	see ordering details	
Tripping classes to IEC 947-4-1/EN 60 947-4-1	see ordering details	
Frequency range	Hz	50 and 60
Switching frequency without early tripping	80 ops./h with 40% if the making current does not exceed 6 x I_n and the starting time does not exceed 1s.	
Resistance per phase in Ω and power loss per phase in W at max. setting current	see page 31	
Required fuses for short-circuit protection	see page 31	

Dimension diagrams see page 32
